

## The Law of Probability

The conflict between the theory of evolution and the Christian faith should not surprise anyone. Science is guided by a doctrine known as Naturalism which states the following:

1. Nature or matter is all that exists.
2. Everything must come about by time, chance and the laws of nature working on matter.

As you can see, God is not allowed. According to modern science there is no god and thus any intervention by a god in human history is impossible.

When one considers the complexity of the cell, it should be obvious that life could not come about by chance. Let's look at what science has to say about this matter.

1. The Law of Probability states that the odds of something happening by chance are impossible at 1 in 10 to the power of 50.
2. The odds of just one simple gene coming into existence by chance are 1 in 10 to the power of 127.
3. Now consider how many genes the first cell required to be self-existing.
4. What are the odds now? It was already impossible at step two.

It doesn't take a Ph.D. to figure out that science has proved its own presupposition to be wrong. So why can't scientists just admit God created everything in six days, and then go about their job of trying to figure out how He did it? Paul M. Stidl said it well, "to admit creation is to admit the existence of the God of the bible.
